DRY BATCH

FEATURES

Dry concrete batching plants are mostly preferred in large scale construction projects and also where the site of construction is far from concrete production unit. Since the dry mix concrete plant has no mixers, it is lower in cost than standard ready mix concrete plants

- As there is no mixer, the investment is lower, yet the returns are high. Our design is suitable for adding a mixer and it easily can be transformed to wet type concrete batching plant
- High efficiency and energy saving. Due to the absence of the mixer, it saves time and electricity consumption.
- Velox dry plants simple structure assures you a convenience for maintenance and long working lives
- Production capacity of the dry plant is much higher than that of the wet concrete batching plant
